The Fire and Rescue Service flood incident data, provided by North Yorkshire Fire and Rescue Service, includes all flood related incidents that the Fire and Rescue Service has been called out to since 1997. Such incidents may include flooding of a building due to a leak to the internal water supply or overflowing of a washing machine. This data may therefore provide a misleading representation of flood related incidents and should be viewed with this in mind. The majority of incidents however relate to flooding from rivers, drains and surface water.
